

MUCOTHINTM SPRAY

QUICKEST BRONCHODILATOR

Respiratory diseases in poultry encompass a range of illnesses affecting the respiratory system of birds, with common pathogens including viruses, bacteria, and fungi. These diseases pose significant challenges to the poultry industry due to their potential for rapid spread within flocks and their adverse effects on bird health and productivity.

Overall, respiratory diseases in poultry represent a significant concern for the industry, necessitating proactive measures to prevent, control, and manage outbreaks to safeguard bird health and maintain productivity.

Problems related to respiratory diseases

- ▶ **Reduced Productivity:** Decreased egg production, poor growth rates, and increased mortality, resulting in economic losses for poultry producers.
- ▶ **Spread within Flocks:** Respiratory diseases are highly contagious and can spread rapidly within poultry flocks through direct contact, airborne transmission, or contaminated surfaces, leading to widespread outbreaks.
- ▶ **Increased Mortality:** Severe respiratory diseases such as ND and AI can result in high mortality rates within affected flocks.

What is Mucothin?
