

QURCUMINOL

Turmeric Oil Rich in Curcuminoids

The utilization of antibiotics as growth promoters has significantly propelled the global growth of the poultry industry. They have been acknowledged for their role in enhancing poultry performance and managing subclinical diseases in the digestive tract. Nonetheless, the pursuit of alternatives to these antibiotics has commenced due to concerns arising from their prolonged usage, including the emergence of resistant pathogens and disruption of the symbiotic relationship between animals and beneficial flora.

Among the array of available alternatives such as probiotics and acidifiers, herbal extracts and essential oils have emerged as economically feasible substitutes. These compounds promote digestion, bolster the immune system, and exhibit antimicrobial properties.

What is Qurcuminol?

Qurcuminol comprises of turmeric oil enriched with Curcuminoids and Black pepper oil .

Curcuminoids demonstrate a broad spectrum of biological activities, encompassing antioxidant, antibacterial, antifungal, antiprotozoal, antiviral, anticoccidial, and anti-inflammatory properties.

Black pepper oil contains two alkaloids piperine & capsaicin, which act as anti-inflammatory, analgesic, helps in digestion and reducing stress.

Benefits of Qurcuminol

- ▶ Improves Growth Performance in Broilers
